Imported Giant Darwin Tulips

Too much cannot be said in favor of the Darwins for outdoor culture. The remarkably brilliant coloring and splendid substance of the globular or cup-shaped flowers, their large size, with long, strong stems of 20 to 30 inches, also robust growth, make them unsurpassed for May blossoms. Usually in bloom by Mother's Day (second Sunday in May). They can be forced easily for March blossoming. For greatest satisfaction we recommend planting named varieties only. The apricot, bronze or copper shades are secured in the Breeders, listed on next page. Bone meal is excellent fertilizer for Tulips.

Old Dutch Garden Tulips . .

Called Breeder Tulips—Darwin Class—Wonderful Pastel Shades

These late-blooming Tulips are among the very popular outdoor bloomers, coming in with the Darwins. They are of a peculiar type, and are exceptionally strong and sturdy. In growth and shape, they are much like Darwins. There are no plain bright or lively colors in them, such as are secured in the Darwins, but there are some extraordinary bronze, coffee-brown, velvet and golden yellow edged blooms. This type supplies the yellow, apricot, bronze and copper shades missing in the Darwins; also other distinct shades. The bronze, brown, buff, and dark shades prevail. The flowers are extra large and sturdy, on long stems.
